

Application Serial No. 09/721,141

Sub
F1

40. (Once Amended) A method for generating a plurality of individually schedulable assignments for a task, based upon task constraints associated with said task, said task constraints identifying N resources assigned to said task where N is a positive integer, and a required work-amount corresponding to each of said N resources, comprising the steps of:

dividing said task into N assignments, said task comprising an amount of work, each assignment comprising a portion of the work that corresponds with an individual resource;

associating each of said N assignments with one of said N resources, each resource comprising one of a non-human and human object capable of performing an assignment;

for each assignment, identifying the task, corresponding individual resource, and one of the portion of work corresponding to a respective resource and a duration of the assignment;

generating a list comprising the N assignments; and

breaking up at least one of the N assignments into sub-assignments when a work-amount of a respective assignment exceeds a time-slot in a resource calendar.

41. (Once Amended) The method of claim 40, wherein said task constraints identify one or more scheduling constraints comprising one of task priority and assignment limit and further comprising the step of associating each of said N assignments with said scheduling constraints.

42. (Once Amended) The method of Claim 40, wherein said task constraints identify one or more scheduling constraints comprising one of task priority and assignment limit and further comprising the step of associating each of said N assignments with said task being divided.

Application Serial No. 09/721,141

43. (Once Amended) A computer-readable medium on which is stored a computer program for generating a plurality of schedulable assignments for a task, said program performing the steps comprising:

receiving a task description for said task, said task description identifying N resources assigned to said task where N is a positive integer, said task comprising an amount of work, a required work-amount corresponding to each of said N resources, and one or more scheduling constraints for said task;

dividing said task into N assignments, each of said N assignments identifying one of said N resources, each assignment comprising a portion of the work that corresponds with an individual resource, each resource comprising one of an non-human and human object capable of performing an assignment;

for each assignment, identifying the task, corresponding individual resource, and one of the portion of work corresponding to a respective resource and a duration of the assignment;

associating each of said N assignments with said scheduling constraints for said task;

generating a list comprising the N assignments; and

breaking up at least one of the N assignments into sub-assignments when a work-amount of a respective assignment exceeds a time-slot in a resource calendar.

Application Serial No. 09/721,141

44. (Once Amended) A computer system for generating assignments for a task, comprising:

a processing unit;

a memory storage device;

a program module, stored in the memory storage device for providing instructions to the processing unit;

the processing unit, responsive to the instructions of the program module, operative to:

receive a task description for the task, the task description identifying N resources assigned to the task where N is a positive integer, said task comprising an amount of work;

divide the task into N assignments, each of the N assignments identifying one of the N resources, each assignment comprising a portion of the work that corresponds with an individual resource, each resource comprising one of an non-human and human object capable of performing an assignment;

for each assignment, identify the task, corresponding individual resource, and one of the portion of work corresponding to a respective resource and a duration of the assignment;

associate each of said N assignments with said scheduling constraints for said task;

generate a list comprising the N assignments; and

breaking up at least one of the N assignments into sub-assignments when a work-amount of a respective assignment exceeds a time-slot in a resource calendar.
